SUMMARY

Final-year Software Engineering student at Multimedia University (MMU) with hands-on experience building 5+ full-stack systems using Java, Python, React, and Flask. Currently developing an AI-powered career recommendation platform as a Final Year Project, applying NLP, REST API design, and system architecture skills. Proven team lead across semester-long software engineering projects. Seeking a 3-6 month internship (from July 2026) in software development, QA, or system design.

EDUCATION

Multimedia University (MMU)

Bachelor of Computer Science (Hons.) in Software Engineering

Cyberjaya, Malaysia

2023 – Present

- Year 3 | Expected Graduation: December 2026 | Available for internship from 27 July 2026

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, C++, SQL, Dart
Web & Backend	React, Flask (REST API), HTML, CSS, Flutter
AI & Data	Natural Language Processing (NLP), LLM API Integration, Data Analysis
Software Engineering	OOP, Design Patterns (Factory, Strategy, Observer), Agile, Requirements Engineering, Software Testing & Debugging
Databases & Design	MySQL, SQLite, CRUD Operations, ER Modelling, UML (Use Case, Class, Sequence, ERD, Object Diagrams)
Tools	Git, GitHub, VS Code, Postman

PROJECTS

FYP: AI-Based Career Path & Skill Recommendation System / React, Flask, Python, NLP

- Building a full-stack AI web app that analyses student and employee profiles using NLP to generate personalised career pathways and skill-gap insights.
- Designing a modular React frontend integrated with a Flask REST API handling NLP pipelines, recommendation logic, and real-time job market data processing.
- Developing an AI career chatbot, skill-gap dashboard, and progress tracker; validating relevance through questionnaire (20+ students) and focus group interviews with 3 industry professionals.

AI Resume Analyzer & Job Matcher — github.com/Amirah50/AI-Resume-Job-Matcher / React, Flask, Python, spaCy, OpenAI API

- Built a full-stack AI system that parses PDF resumes, extracts skills using spaCy NLP, and matches them against job descriptions via cosine similarity — with an XAI layer (OpenAI GPT-4o-mini) generating transparent, actionable skill-gap feedback.
- Designed a persistent SQLite + SQLAlchemy backend, CORS-enabled React frontend, and interactive Recharts dashboard displaying match scores and personalised learning recommendations.

Family Tree Web App — amirah50.github.io/family-tree / JavaScript, HTML, CSS

- Helps families document and preserve multi-generational relationships through an interactive, browser-based tree builder.
- Keeps all data local to the device for privacy, with export support so families can back up and share records without a server or account.

ACHIEVEMENTS & ACTIVITIES

Academic Group Leader — Multimedia University

- Led 4-person teams across 4+ software engineering projects, owning task delegation, code reviews, and on-time delivery.

Tech Girls Club, MMU Cyberjaya — Marketing Team Member

- Contributed to club outreach, digital communications, and event promotion for a tech-focused student society.
